

Novelis Aluminiumrecyclingwerk aufgenommen am Mittwoch (25.06.14) in Nachterstedt | © Copyright Jens Schlueter

Novelis has so far invested around 300 million U.S. dollars in **aluminum recycling** at its site in Nachterstedt, Saxony-Anhalt. The "Solar Materials" project is still operating in a test facility. Three founders have developed a technology that enables them to **recycle solar equipment** almost completely. APK AG, which now employs 220 people, has developed a recycling technology to keep plastics in the circular economy. The company is the first to produce **single-variety recyclates** from plastic composites on an industrial scale. Meanwhile, in northern Saxony-Anhalt, the Altmark Industrial and Business Park (IGPA) is growing as a bioenergy site in the countryside. The Canadian Mercer International Group opened one of the world's most modern pulp mills here in 2004. Residual materials from production are used to feed a modern biorefinery. These and other examples demonstrate the importance of the circular economy in Saxony-Anhalt. You can find more information in our press kit.
